MALTA: A PROFILE

Malta comprises an archipelago of five islands: the island of Malta is the largest, followed by Gozo, Comino, Cominotto and Filfla. The latter two are uninhabited islets. The Maltese Islands are situated in the Central Mediterranean Sea, 93 kilometres south of Sicily and 290 kilometres north of Libya.

The climate is a Mediterranean one characterised by hot, dry summers and cool winters with an annual average rainfall of nearly 476 millimetres. Temperatures are stable, the annual mean being 19°C and monthly averages ranging from 15°C to about 31°C in the summer months. Winds blow frequently over Malta. The most prevalent are the cool northwesterly known in the vernacular as *il-majjistral*, the dry northeasterly called *il-grigal*, and the hot southeasterly called *ix-xlokk*.

Malta gained independence from Britain on 21 September 1964 when it also joined the Commonwealth. The country became a Republic on 13 December 1974. Its form of government is one legislative house, *il-Kamra tad-Deputati*, elected by Universal Suffrage for a term of five years.

The Maltese economy progressed from one harnessed to the needs of the British colonial administration up to the mid-1960s, to a market-driven economy with an emphasis on higher value added economic activities in services, notably financial services and tourism. Challenges to the Islands' economy are the relatively small domestic market and the disadvantages brought about by insularity. Major assets are a pleasant and attractive climate, and a qualified, skilled and hard-working labour force.

The Maltese people have evolved through centuries of domination by Arab, Norman, European and English administrators. An important legacy, evident especially in Maltese architectural heritage and culture, is the one bequeathed by the Knights Hospitallers of the Order of St John of Jerusalem, who ruled the Islands from 1530 to 1798. The Knights' era is evoked especially in the walled cities of Malta, among which is Valletta, a living exposition of Baroque architecture. In spite of, or perhaps because of, these diverse influences, the people have retained their Malteseness, manifested in folk festivals, village feasts, religious ceremonies and pageants such as those organised in the Easter period. The people themselves have a warm and hospitable disposition, but also exhibit the hardihood and strong survival instincts of an island race.

The island of Gozo bears a number of similarities to Malta, but also considerable diversity. Gozo comprises a land area of 67 square kilometres, and a resident population of approximately 31,000. Gozitans have a very distinctive set of characteristics which include lifestyle, language intonations, folklore, as well as a robust tradition of cottage industries.

For such a relatively small population and land area, Malta and Gozo teem with cultural events. Carnival dates back to at least the middle of the 15th Century and combines Maltese time-honoured traditions with contemporary dance and popular culture. The *Notte Bianca* is organised every year, showcasing the auberges, palaces, churches, museums and the arts in Valletta among the Maltese people and visitors to the country. Valletta, Malta's capital city, has been named European Capital of Culture for 2018.

Official Name:	Repubblika ta' Malta (Maltese) Republic of Malta (English)
Area:	316 km ² , 122 square miles
Shoreline Malta:	200.0 km
Shoreline Gozo and Comino:	71.2 km
Capital City:	Valletta
Official Languages:	Maltese and English
Monetary Unit:	euro (€)

FOREWORD

Malta in Figures 2014 provides a selection of relevant statistics that reflect Maltese society and the economy. It presents a range of information, from hallmark indicators that define the economic state of the country to statistics on population, health, education and tourism.

The sources include government authorities and departments, other authoritative entities, as well as a number of surveys which are carried out by the NSO in line with EU harmonised standards and methodologies.

This publication is designed as a practical and handy guide to users. It does not, however, represent the extent of the NSO's output. Readers are encouraged to use this booklet as a starting point to the additional and complementary body of information available through the NSO's website and online database.

Many of the sections are enriched by explanatory notes which should be read in conjunction with the tables and charts.

The National Statistics Office is Malta's official national statistical agency.

Joseph Bonello
Acting Director General

November 2014

KEY FACTS ABOUT MALTA IN 2013

Rainfall	479.6 mm
Population	425,384
Population density (persons per km ²)	1,346
Life expectancy at birth	81.9
Males	79.6
Females	84.0
Live births	4,032
Crude birth rate	9.5
Deaths	3,236
Crude death rate	7.6
Licensed road vehicles/1,000 inhabitants	759.2
Road casualties/1,000 inhabitants	3.7
GDP at market prices	€7,510.1 million
Balance of Payments current account	€241.5 million
Employed population (LFS)	175,472
Unemployment rate (LFS)	6.4%
Imports of goods	€5,683.1 million
Exports of goods	€3,925.2 million
Tourist arrivals	1.6 million
Average tourist length of stay	8.1 nights
Physicians	1,795

About the Artist

Joseph Casapinta was born on 26 November 1965. From a young age it was clear that his life would be influenced primarily by the visual artists and graphic designers in his family and later, by his circle of friends. This was exemplified by his early talent with brushes and pencils; each and every brush stroke or pencilled line revealing a natural gift for expressing fantasy and romanticism, reality and life. Casapinta's imagination expanded in line with his ability. Through his training as a graphic artist, he displayed a high level of competence and is an excellent illustrator, especially with pen and ink. It has been noted that this is a very successful medium for Casapinta and it may be said that his delicate, insightfully romantic interpretations are impeccable and highly sought after. Throughout the years Casapinta has experimented in various mediums, taking on a new dimension in style. This has resulted in a number of collections that reflect moods and transitions that materialised in the birth of an artistic conscience in the making. Casapinta turned his artistic eye away from acrylic and oils, and has diverted to explore his passion for watercolours. This is a natural progression for Casapinta in one sense as, although it is a return to where he began in terms of his impressions of rural scenery, he is now producing vividly realistic urban scenes, naturalistic sea and landscapes, and exploring new subjects and ways to express his impressionistic vision. This is achieved by reaching a new level of technical ability, maturity and strength both locally and abroad, coupled with a return to outdoor painting which gives him a great feeling of freedom and aids the artistic creativity he exemplifies.

Notes: (1) E. coli is short for Escherichia coli. Although these bacteria normally live in the intestines they can survive quite well outside the body in faecally-contaminated environments such as water or mud.

(2) The Intestinal Enterococci group can be used as an index of faecal pollution. This group survives longer in water environments than E. coli, and is more resistant to drying and to chlorination. Intestinal Enterococci have also been used to test water quality after repairs to water systems or the installation of new water mains.

(3) Classification based on Directive 2006/7/EC of the European Parliament and of the Council of 15 February 2006 concerning the management of bathing water quality.

Methodological Notes

1. The short-term indicators comprise a number of business cycle indicators showing the evolution of the market of goods and services in the economy. The indicators record the evolution of turnover, production, producer prices, employment, wages and salaries, and hours worked over long periods of time. The objective of these indicators is to measure the market activity in the industrial, construction and services sectors. These indicators are compiled as a "fixed-base-year Laspeyres type indices". The current base year is 2005. The data are not seasonally and working-day adjusted.
2. Industrial activities are in line with section B, C, D and E of the statistical classification of economic activities. NACE divisions 09, 19, 24 and and NACE group 30.90 have been excluded because of their negligible activity. Construction activities covered are in line with Section F. Services activities are covered by Sections G to N with the exception of section J. In line with the Short-term Statistics Regulation, the term 'Services' excludes, inter alia, Financial and Insurance Activities and Gambling and Betting Activities
3. Whereas industrial indicators are broken down by MIG (main industrial grouping) classification, Construction and Services activities are broken down by NACE division (2-digit) and section levels respectively. The MIGs are broken down as follows:
 - Intermediate goods;
 - Energy;
 - Consumer goods;
 - Capital goods;
 - Durable consumer goods;
 - Non-durable consumer goods.
4. The data for industry are collected by means of a representative sample of approximately 440 enterprises every month. The data are then grossed up to represent the entire industrial population. The data on services, wholesale and retail and construction are collected every quarter by means of another sample consisting of approximately 1,500 enterprises. The data on new permits are obtained from the Malta Environment and Planning Authority (MEPA).
5. Some figures are provisional and are subject to revision.

Summary definitions of key variables

1. Turnover: includes total sales and other income and is expressed net of VAT. Turnover is presented in current prices.
2. Employment: covers all persons employed, regardless of whether they are part-time or full-time, and includes paid employees as well as working proprietors and unpaid family workers.
3. Hours worked: covers total amount of hours actually worked; regular working hours and also during overtime; during nights, Sundays or Public holidays. Hours worked but not paid are also considered.
4. Wages and Salaries: covers wages and salaries including bonuses, weekly allowances (cost of living allowances), overtime and national social security contributions by the employee. It does not include employer's social security contributions.
5. Producer prices cover the ex-factory price for a product excluding VAT.
6. New permits for dwellings cover rooms or suites or rooms and its accessories in a permanent building or structurally separated part thereof that, by the way it has been built, rebuilt, converted and so on, is intended for private habitation.
7. Production covers the major products produced by leading enterprises. Furthermore, industrial production is also estimated for certain enterprises by having their turnover deflated by the industrial producer price index. Other estimates of production include the usage of hours worked where production methods span over long periods of time.

Note: The LFS is designed to satisfy the concepts and definitions as outlined by Eurostat. This allows the comparability of results with other EU Member States and countries following ILO definitions of employment and unemployment. Occupations are classified according to the ISCO classification (International Standard Classification of Occupations). From 2011, ISCO classification was updated to ISCO 08 in line with Eurostat requirements. Data according to ISCO 08 are additionally provided retrospectively for 2010.
